

Unifine[®] Pentips[®] Plus

The needle that makes diabetes easier to live with

Let's stick it to diabetes

Diabetes can be hard to live with day after day, year after year. You make roughly 180 additional decisions each day because of your condition.

You do a great job with it but it is tiring – so you might, understandably, be taking a few shortcuts to save time and effort. Some of those shortcuts are risky though. Reusing needles can worsen your health or diabetes management. And not disposing of sharps properly can put you or others at risk of a needlestick injury.

THE REALITY OF LIVING WITH DIABETES

-  Over **40%** of people with diabetes admit to disposing of sharps in their household waste, putting others at risk
-  **57%** of people with diabetes reuse needles, increasing the risk of infections or lipohypertrophy (those fatty lumps that can appear under the skin where you inject)
-  Most needlestick injuries happen when recapping.

If you're like most people living with diabetes, then it seems that regular needles may not be working all that well for you. You need a solution that makes good injecting practices easier to fit into your busy lifestyle.

Unifine[®] Pentips[®] Plus

Welcome to Unifine® Pentips® Plus

Unifine® Pentips® Plus needles make it easier to live with diabetes. Each needle comes with a built-in removal chamber for convenient needle change and storage. Our Safe Click Technology™ indicates when your used needle is secured into the locking chamber, providing a convenient solution for needle disposal on-the-go.

⊕ Bye-bye blunt needles

With Unifine® Pentips® Plus needles, you can:

- Inject comfortably with a new, sharp needle every single time
- Reduce the risk of needlestick injuries
- Safely cap and store used needles wherever you are
- Cap the needle with one hand using a flat surface
- Improve diabetes management and reduce the risk of infection and lipohypertrophy associated with needle reuse.

👤 The needle for every age and lifestyle

Unifine® Pentips® Plus needles support everyone with diabetes:

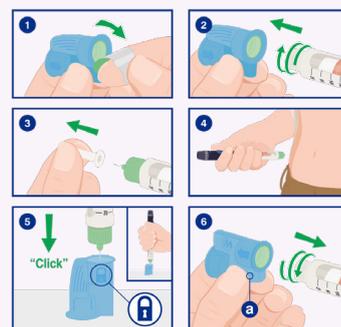

- Kids with diabetes can safely cap their needle and get on with life at school, sport or playdates
- Adventurous types can travel light - no need to take a sharp box with you or end up reusing needles because you can't dispose of them right away
- Busy people can easily cap and change a needle - no need for risky shortcuts anymore because it's just as quick to do it the right way
- Older people with arthritis or low vision no longer need to struggle with fiddly, small needles - Unifine® Pentips® Plus can be changed with a flat surface and one hand. It's that easy.
